EXPERIENCE

Software Developer (Fixed-term Contract)

August 2026 - December 2026

Sprinter Delivery

Coquitlam, BC

- Built a ten-screen **React** and **TypeScript** portal for courier orders, dispatch, and billing, replacing an Excel and VBA workflow containing 13,855 legacy orders
- Built a **React** and **TypeScript** Progressive Web App (PWA) that stores delivery photos, signatures, and GPS data in **IndexedDB** and queues uploads while couriers work offline
- Integrated **QuickBooks** invoicing and payment-status webhooks with the courier platform, alongside **Pumble** dispatch notifications, reducing manual transfer of accounting and delivery information

Software Development Intern

May 2026 - August 2026

Zip

Vancouver, BC

- Built six **React** and **TypeScript** dashboards backed by 35 **REST** endpoints for **Linear** ticket data, giving engineering managers views of project progress, review delays, estimation accuracy, and contractor costs
- Built scheduled ingestion for approximately 10,000 Linear and Asana tickets using **GraphQL** and **REST** APIs, with cursor checkpoints, rate-limit retries, and daily reconciliation checks
- Migrated dashboard reads to **PostgreSQL** and **Redis**, reducing modal-cache expiration from 12 hours to 10 minutes and invalidating cached results after successful synchronization
- Added 11 health checks for drift, stalled synchronization, and API availability, with reconciliation triggers and **Claude**-generated explanations of likely causes for dashboard users

Software Engineering Intern (Test Automation)

May 2025 - December 2025

Insurance Corporation of British Columbia (ICBC)

Vancouver, BC

- Developed and maintained more than 70 **JavaScript** and **TestCafe** regression tests for UI workflows and backend APIs, supporting ICBC's insurance-platform cloud migration
- Integrated parallel automated tests into **TeamCity** continuous integration and delivery (**CI/CD**) pipelines, reducing reliance on local runs and cutting test development time by approximately 40%
- Automated test-data extraction and consolidation across multiple sources with **Python**, replacing manual review steps and saving the team more than 10 hours per week

PROJECTS & HACKATHONS

Fall Line | github.com/davivargas/Fall-Line | youtu.be/U6WIyQr13k

- Built an offline **Android** snowboarding tracker with **Flutter** and **Kotlin**, backed by **FastAPI** and **PostgreSQL**, to record GPS sessions and identify runs, lifts, and stops
- Configured **GitHub Actions** to run **pytest** and **Flutter** tests with linting and type checks, applying **Alembic** migrations before backend tests to check database compatibility

EDUCATION

British Columbia Institute of Technology

Expected December 2026

Computer Systems Technology Diploma | GPA: 4.0/4.0 (BCIT GPA 95%)

Vancouver, BC

Federal University of Espirito Santo

Graduated January 2021

Bachelor's in Mechanical Engineering

Brazil

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, Dart, C, HTML/CSS, R, Kotlin (basic)

Frameworks: React.js, Node.js, Flutter, FastAPI, Prisma, Jest, Vitest, pytest, Playwright, JUnit, TestCafe, Selenium

Developer Tools: Git, GitHub, GitHub Actions, BitBucket, Docker, AWS, CI/CD (TeamCity), Jira

Databases: SQL (PostgreSQL, MySQL, Supabase), NoSQL (Redis, Firebase), IndexedDB

Concepts: REST & GraphQL API Design, Progressive Web Apps (PWA), Object Oriented Programming, Data Structures and Algorithms, Agile Methodology, SDLC
